## LGU Inspection Summary 2020

This summary includes end of season responses from 55 local government units (LGU).

## Program Summary

Number of Accesses Inspected

Local Government inspection programs reported working 212,841 hours in 201202020 at 673 accesses. 86\% of LGU programs reporting.
 ＋Coverage hrs＝\＃of hrs by at least one inspector．If two ins pectors worked from 6：00 AM to 4：00 PM that would be 10 Coveraga hrs and 20 total（man）Hrs ：Solon

## Itasca SWCD <br> AIS Control \& Monitoring Program 2020 Executive Summary

## Early Detection Efforts

- Zebra Mussel Veliger Settlement Samplers
+ Our crew deployed 67 veliger settlement samplers among 54 lakes in Itasca County that are of highest risk for Zebra Mussel infestation.
- Veliger Sampling
+ We collected and analyzed 35 plankton samples from 9 high-risk lakes in search of the presence of Zebra Mussel Veligers.
+ Early Detection Surveys
+ Thorough AIS surveys were completed on 69 lakes, 6 stretches of river, and 20 roadside wetlands within Itasca County in search of all invasive plants and animals.

## New AIS Discoveries

- New Zebra Mussel populations were discovered in Bowstring, Ball Club, Jay

Gould, Little Jay Gould, and Pokegama Lakes in 2020

- A total of approximately 5100 sq ft of Curly Leaf Pondweed was found among 2 separate locations on Deer Lake (Deer River Area).
- New Purple Loosestrife infestations were found on Round Lake (in Squaw Lake) and on the Bigfork River Near Wirt, MN.

## Control Efforts

- Mechanical Control
+ Hand-pulled approximately 40 individual plants of Flowering Rush near the boat ramp of Spider Lake. Those plants were all growing within area of around 180 sq ft .
+ Hand-pulled approximately 5100 sq ft of Curly Leaf Pondweed from 2 separate locations on Deer Lake (Deer River Area).
+ Cleaned up the Starry Stonewort that was washed up on the West Winnie boat ramp during 3 separate events to prevent trailers from transporting the plants to other bodies of water.
- Chemical Control
+ Purple Loosestrife control efforts were implemented on 48 lakes, 4 separate stretches of river, and over 50 roadside wetlands.
- Biological Control
+ 56,798 Purple Loosestrife Defoliating Beetles were collected from known populations and dispersed throughout 17 sites with dense Loosestrife infestations.

## Collaboration with MN DNR, Lake Associations, and Private Landowners

- Worked with DNR AIS Specialist Rich Rezanka to map out Eurasian Watermilfoil on McKinney lake to prepare for chemical control efforts.
- Teamed up with DNR to map the extent of new Zebra Mussel infestations on Pokegama, Jay Gould, Little Jay Gould, Ball Club, and Bowstring Lakes.
- Took plankton samples on Turtle, Grave and Little Bowstring Lakes by request of their respective lake associations.
- Released 6700 Purple Loosestrife Defoliating Beetles near the Wabigama Duck Camp on Bowstring Lake by request of the members of the hunting club.
Working with the core staff of the Itasca SWCD to implement a Buckthorn management project on the SWCD property in 2021.

## 2020 Itasca FiveStar Service Providers

Please move your business to an Itasca FiveStar service provider. FiveStar providers are DNR-certified, sign a contract agreeing to apply additional specified AIS best-practices and safeguards when moving from one lake or river to another, and agree to help identify and disseminate AIS best practices and safeguards throughout Itasca County. See description of services below. Rev04012021

- Cross Country Boat Transport 651-437-2454
- RMB Labs 218-322-2304
- PLM Lake and Land Management 866-687-5253

## Success Stories

On July $22^{\text {nd }}$ and $23^{\text {rd }}, 2020$ our AIS Control \& Monitoring crew discovered two separate patches of Curly Leaf Pondweed on opposite ends of Deer Lake that covered a total of 5100 sq ft in area. Upon further inspection of the sites, it was found that the plants were rooted in very soft substrate in shallow water which would allow for easy hand-removal of the plants without a crew of divers.

Chris Evans quickly contacted DNR Aquatic Invasive Species Specialist, Rich Rezanka and the Deer Lake Association to coordinate a Curly Leaf removal event.
The event took place on August $4^{\text {th }}$ with six Control \& Monitoring Technicians and five members of the Deer Lake Association working together to uproot the plants, transport them to shore in Rubbermaid bins, and dump into a trailer to be moved off-site.

Every Curly Leaf Pondweed plant located was removed from the Lake. Deer Lake will be monitored, and a similar management plan will be implemented in future seasons to maintain control of the invasive plant.

Below: Two Control \& Monitoring crew members uprooting Curly Leaf Pondweed by hand; Deer Lake.

Below: Curly Leaf Pondweed discovered near the access of Deer Lake.

Pictured Above: Purple Loosestrife on Bowstring Lake that has been devastated by the biocontrol agent Galerucella calmariensis. Note how all other native vegetation is green and unaffected by the defoliating beetle.

Pictured Below: 2020 was marked by the COVID-19 Pandemic, Itasca SWCD AIS provided PPE to every inspector. The masks we made in house.
